

Apn for t mobile iphone

Continue

What are the apn settings for t-mobile. Apn settings for t mobile iphone. How to set up new iphone on t mobile.

There are currently at least a million unlocked iPhones on T-Mobile's network, or at least that's what the carrier has been telling people at the PepCom conference in New York. T-Mobile claims most of the phones pre-date the iPhone 4, which means those users physically had to trim their T-Mobile SIM card to get them to fit into their device. A further testament to the fervor of the iPhone faithful is the fact that these "trimmed" iPhones don't even get 3G or 4G service because they lack some key pieces of hardware and don't match up with T-Mobile's radios. A T-Mobile spokesman also said that microSIMs are in the works, which would mean no more card trimming, but didn't give a release date. Of course, there is now an easier way to get an unlocked iPhone for those who have the cash, as Apple has started selling an unlocked version of the iPhone 4 in the United States. There are few advantages to the unlocked iPhone other than the ability to escape AT&T, which is in the process of swallowing up T-Mobile. It's nice to be able to avoid those silly two-year service contracts, and great for international travel, but the added expense or potential for degraded service seem like a high price to pay. Then again, can a million unlocked iPhone users be wrong? Apple today announced three brand new iPhone models - iPhoneX, iPhone 8, and iPhone 8 Plus. Naturally, the three new handsets will be available via all major US carriers, but what about smaller mobile operators? Well, we can tell you that XfinityMobile (launched earlier this year by Comcast) will sell the iPhone 8 and iPhone 8 Plus later this month. Xfinity is planning to release the iPhone 8 and 8 Plus on September 22, just like Apple and other carriers. Both devices will be available to pre-order online and in stores starting September 15. Pricing details haven't been shared, but Xfinity will probably go with Apple's official prices: iPhone 8 starting at \$699, and iPhone 8 Plus starting at \$799. Xfinity does not mention the iPhone X, but that doesn't necessarily mean it won't sell it. As you may know, Apple will launch the iPhone X after the iPhone 8 series, on November 3, so there's still time for Xfinity to see if it can offer this handset, too. Comcast is operating Xfinity Mobile as an MVNO (mobile virtual network operator) that offers wireless services using Verizon's LTE network plus about 18 million Wi-Fi hotspots across the US. More information about Xfinity Mobile can be found at the second source link below. Xfinity Mobile is already selling all the iPhone models that Apple currently has in stock, from the iPhone 7 and iPhone 6s series to the iPhone SE. Of course, the company also has high-end Android handsets in its line-up, including the Samsung Galaxy S8 and Galaxy Note 8 (the new Note is available only to pre-order, but will be properly launched on September 15). sources: Press release (Business Wire), Xfinity Mobile iMore is supported by its audience. June 8, 2017 10:19 am ET Order Reprints Print Article Daniel Acker/Bloomberg T-Mobile has been the only bright spot in wireless this year -- its shares are up 14% so far 2017, while those of the other major carriers have languished. And one analyst thinks T-Mobile will be the big winner once again come the fall, when the much anticipated iPhone 8 gets released. Drexel Hamilton analyst Barry Sine initiated coverage of T-Mobile on Wednesday with a Buy rating, partly due to his faith in the company's positioning during iPhone launch season later this year. He thinks shares could hit \$80, 21% above current levels. T-Mobile has been the only bright spot in wireless this year -- its shares are up 14% so far 2017, while those of the other major carriers have languished. An error has occurred, please try again later. Thank you This article has been sent to If you don't have an unlimited data plan on your phone, going over the limit can give you serious sticker shock when the bill arrives. Luckily, you can avoid accidental overuse by just turning off the data on an iPhone or Android smartphone. How to Turn Off Mobile Data on iPhone and Android As you can see in the video above, the steps are simple, but some phones make it even easier with a quick button you can use to turn data on and off. Quick-Access Mobile Data Buttons On an iPhone, this button is on the pull-down menu. The icon looks like a cell phone tower as pictured here. Credit: Clark.com On an Android phone, the button is on the pull-down menu. The icon looks like a down arrow next to an up arrow, pictured here. Credit: Clark.com Once you've turned off your data, you can still use Wi-Fi where it's available. How to Turn Airplane Mode On and Off on iPhone and Android Another way to use less data is to put your phone into Airplane Mode. Activating this function turns off the mobile data and disables your phone's ability to send and receive calls and messages. You can still use Wi-Fi while your phone is in Airplane Mode. Here's how to turn Airplane Mode on and off. With these tools, you can manage your data use to make sure you don't go over your limits to trigger a shocking bill. More Stories From Clark.com You Might Like: You should probably check the APN or Access Point Name. AT&T and the rival carriers all have them and it's their gateway between the cellular network and the internet. If your APN settings aren't just right, then you may not be able to send or receive multimedia messages (MMS) and you may not receive cellular data or calling features such as Voice over LTE (VoLTE). What is an APN? What are AT&T's APN settings? Still not working? What is an APN? APN is the Access Point Name, which is kind of like your phone's password to the internet. You need the APN settings for you to be able to access AT&T's LTE network. Entering the APN helps the carrier decide what type of connection needs to be made, which IP address to assign and what type of security method needs to be used. Most of the time this information will be automatically populated but sometimes you will need to make sure it's up to date or enter it on an unlocked phone. To activate an unlocked phone, you will for sure need an AT&T SIM card, but so long as your phone is compatible with AT&T's network, you should be good to go. What is an APN, and how do I change it? What are AT&T's APN settings? You can find the APN settings in your phone's mobile network settings. Name: NXTGENPHONE APN: NXTGENPHONE Proxy: not set Port: not set Username: not set Password: not set Server: not set MMS: proxy: proxy.mobile.att.net MMS port: 80MCC: 310MNC: 410 Authentication type: None APN type: default,mms,supl,hipri APN Protocol: IPv4/IPv6 Bearer: Unspecified If you need APN settings for a tablet or another device, you can find those settings on AT&T's support page. (opens in new tab) Still not working? When my phone data goes away I have a small panic attack. Once I've recovered, the next thing I try is checking for outages in my area. Here's how to determine if there is an outage in your area and what to do if there is. If things are looking good for the network, you can try simply restarting your device, resetting network settings to default, and a factory reset. If this all fails, you may have a malfunctioning device or SIM card. You're best bet would be to visit an AT&T store if possible to find the issue. Just when the annual iPhone-on-Verizon rumors were starting to calm down, a new batch of rumors has started, this time claiming that the iPhone may come to T-Mobile, instead. Shaw Wu, an analyst with the investment firm Kaufman Bros, is telling investors that the iPhone may come to T-Mobile USA as early as this fall. In a note to clients, Wu said that the iPhone will be available on multiple carriers in the United States by 2011, and the first carrier to get the iPhone after AT&T exclusivity ends is likely to be T-Mobile. The Kaufman Bros analyst based his assessment on discussions with sources in Apple's product supply chain and others, according to the Associated Press. T-Mobile is the smallest of the four major U.S. carriers and offers a variety of smartphones including Android devices like the myTouch 3G, Samsung Behold II, and Motorola Cliq XT. Apple's iPhone is also no stranger to T-Mobile since the International wing of the company carries the iPhone in a variety of European countries including Austria, Croatia, Germany, and the Netherlands. Like AT&T, T-Mobile USA is a GSM-based network, making it a relatively simple adjustment to produce iPhones for the smaller carrier's network. Verizon and Sprint, on the other hand, are CDMA-based networks and incompatible with the current version of the iPhone. But how would T-Mobile handle the data demands iPhone users place on a network? Even though it's surprising how little data iPhone owners actually use, AT&T's struggles with the data load from iPhone users have been well documented. So if AT&T, serving 85 million wireless customers on its 3G data network, has service issues, how would T-Mobile with its current base of 33.7 million users deal with an onslaught of iPhones? Wu is also arguing that other carriers will also be getting the iPhone. Could the iPhone be coming to Verizon and/or Sprint as well? Perhaps Verizon and/or Sprint have plans to adjust their networks so that they can carry the iPhone, as some carriers in Canada have done. Or will Apple look at smaller, regional GSM-based carriers as potential partners instead? Then again, haven't we gone through this before? Every few months rumors turn up predicting the end of iPhone exclusivity in the United States, and every time the rumors are proven wrong. So don't be too surprised if AT&T remains the exclusive iPhone provider well past this fall and into 2011. Connect with Ian on Twitter (@ianpaul).
